

Canon ScanFront 400 Integration for Laserfiche®

About

CDI's ScanFront/Laserfiche integration allows users to scan documents from a Canon® ScanFront 400 scanner directly into selected folders within Laserfiche.

Once configured, users select a created profile from the scanner, specify a document path or use a preset path, and enter the document metadata. The document and metadata is automatically scanned and sent to the selected location within the Laserfiche Repository.

Entering metadata on a Canon ScanFront 400

The ability to create custom profiles using the Scan-Front integration is an added benefit. These profiles include Laserfiche login options, along with many document and scanner settings, making this integration extremely user-friendly.

Features

The ScanFront Integration for Laserfiche from CDI provides the following features:

- ✓ Automatic scanning of documents into any selected Laserfiche folder
- ✓ Custom scanning profiles
- ✓ Apply metadata to documents prior to scanning
- ✓ Includes 7 workflow designer activities
