

# GovQA® Integration for Laserfiche®

## About

CDI's GovQA® Integration allows for simple interaction between Laserfiche and GovQA, the leading platform for managing FOIA (Freedom of Information Act) requests.

Users may easily attach documents from the Laserfiche client to the FOIA requests and activities in GovQA with the click of a button. Documents are kept securely within Laserfiche and a link to the document in WebLink is pushed to GovQA.

After documents are attached to the request or activity within GovQA, users may view the documents through Laserfiche WebLink via the URL added to the request.

The features of the GovQA® Integration by Cities Digital include:

- **Ability to make documents from Laserfiche available read-only for public users.**
- **Attachment of one or more documents to open requests or activities in GovQA.**
